

Class Project Page

This component can be used to get your students more involved or interested in the material you are teaching them. The Class Project page will give them more of a visual experience.

For example:

A teacher, Mrs. Clancy, wants to use her Class Project page to get students involved in a Science Fair project scheduled for later in the year. She has four groups and has assigned six students to each. For each group, she can assign a website project. Using the Class Project page, students can have their own area to document their project, create a calendar with deadline dates, and post additional reading on their Document Manager page.
